Summary

Backend engineer with eight years of experience building payment and claims systems on .NET and Azure, comfortable owning services from design to on-call and mentoring engineers who are new to distributed systems.

Experience

Senior Software Engineer, Contoso Health (Seattle, WA) **2021 to present**

- Built Kafka consumers that process 40,000 events per second with zero data loss across three regions and two failovers during the quarterly enrollment peak.
- Cut SQL Server query latency by 63% by redesigning indexes and removing N+1 queries in the claims API.
- Led a team of four engineers delivering a claims platform on Azure Service Bus and Cosmos DB.

Software Engineer, Fabrikam Logistics (Remote) **2017 to 2021**

- Maintained a C# and .NET Core order service used by 120 warehouses.
- Introduced contract tests that caught 30 breaking API changes before release.

Skills

C#, .NET 10, ASP.NET Core, EF Core, SQL Server, Redis, Azure Service Bus, Kafka, Docker

Education

B.S. Computer Science, State University, 2017
